

Tipper

TruGroup's tipper builds demonstrate the range of what's possible when fabrication is built around the operational requirement.

The TruGroup 7 tonne tipper was developed as a robust, work ready solution for demanding site work. Built on a proven platform with a 4.6m Bison steel tipping body, 51 degree tipping angle, dual swing tailgate, and integrated tool storage, it's a practical, high performance build designed to handle the daily demands of commercial operations straight out of the workshop.

When a civil services maintenance contractor needed a vehicle that could move between civil works and grounds maintenance without changing trucks, TruGroup adapted a standard tipper configuration with a bespoke full deck cage, creating a single vehicle capable of crossing between two operational environments. A swing open rear gate and retractable tarp system complete a build that's as practical as it is versatile.

Different jobs. Different requirements. Same commitment to building something that works.
