

Traffic Management Builds:

TruGroup is a traffic management business. We operate sites, we manage fleets, and we understand the daily demands placed on traffic management vehicles because we place those same demands on our own. When the equipment available in the market didn't meet our operational standards, we built better. That's how this range started, and that hands on operational reality still drives every design decision we make.

Whether you're an established traffic management operator refreshing your fleet, or new to traffic management and working out what you need, these trucks were designed from the inside out.

All our builds include:

Overhead beacon

Front & rear LED flashers

Rear deck work lights

Reverse/deck camera

Handbrake alarm wired to horn

Reverse alarm

Sandblast decks, anti-rust prime, and topcoat specification JW 180123A to match cab

Grip deck

We work across all major cab and chassis platforms and carry strong procurement relationships with leading truck brands.

City Series

When the job outgrows the Ute but the operation still demands agility, the City Series is the answer. Designed for single cab, 2500mm wheelbase configurations, it's short wheelbase makes it maneuverable in tight urban environments while carrying the equipment capacity a Ute simply can't match. Available in arrowboard, TM-VMS, or Dual VMS configuration, the City Series adapts to your operational requirement, make it a cost-effective, versatile addition to any fleet where space, maneuverability, and equipment capacity all need to be balanced.

It's a single cab platform that punches above its weight. Compact enough to work efficiently on site, adaptable enough to handle the changing demands of a TM operation, and built to the standard you'd expect

Features

Arrowboard, TMVMS or Dual VMS

Certified restraint connection point

Level 1 capability

Galvanised signs rack
