

Traffic Management Builds:

TruGroup is a traffic management business. We operate sites, we manage fleets, and we understand the daily demands placed on traffic management vehicles because we place those same demands on our own. When the equipment available in the market didn't meet our operational standards, we built better. That's how this range started, and that hands on operational reality still drives every design decision we make.

Whether you're an established traffic management operator refreshing your fleet, or new to traffic management and working out what you need, these trucks were designed from the inside out.

All our builds include:

Overhead beacon

Front & rear LED flashers

Rear deck work lights

Reverse/deck camera

Handbrake alarm wired to horn

Reverse alarm

Sandblast decks, anti-rust prime, and topcoat specification JW 180123A to match cab

Grip deck

We work across all major cab and chassis platforms and carry strong procurement relationships with leading truck brands.

Liberty Series

One of TruGroup's original designs and long our highest performing build, the Liberty Series has earned its place in the range through proven operational performance rather than paperwork. It remains one of the most practical, hard wearing TM trucks available for level 1 crew cab operations.

The alloy construction, floor and sides, was a deliberate design decision to keep the build light and maximise payload on a class one licence. The 3850 wheelbase gives it significantly more carrying capacity than the City or Workhorse Series without stepping up to a heavier platform.

On site, the difference shows. Drop down sides make loading and unloading efficient under pressure. Galvanised sign boxes, not painted, galvanised, hold up to the daily punishment of TM work without the rust, scratching, and deterioration that painted alternatives show over time. It's the kind of detail that matters when a truck is in operation five days a week.

TMVMS capable and built with a certified fall arrest system, the Liberty Series is a layout that Traffic Operations Managers consistently recognise, because it's designed around how the job actually works.

Features

Alloy floor and sides

Level 1/Level 2 capability

Galvanised signs rack

Certified fall arrest system

Arrowboard/TMVMS
