

Traffic Management Builds:

TruGroup is a traffic management business. We operate sites, we manage fleets, and we understand the daily demands placed on traffic management vehicles because we place those same demands on our own. When the equipment available in the market didn't meet our operational standards, we built better. That's how this range started, and that hands on operational reality still drives every design decision we make.

Whether you're an established traffic management operator refreshing your fleet, or new to traffic management and working out what you need, these trucks were designed from the inside out.

All our builds include:

Overhead beacon

Front & rear LED flashers

Rear deck work lights

Reverse/deck camera

Handbrake alarm wired to horn

Reverse alarm

Sandblast decks, anti-rust prime, and topcoat specification JW 180123A to match cab

Grip deck

We work across all major cab and chassis platforms and carry strong procurement relationships with leading truck brands.

Hybrid Series

The future of TM fleet management isn't just about what a truck can do on site, it's about what it costs to run, what it puts into the environment, and how it treats the people operating it. The Hybrid Series was designed with all three in mind.

Built on a hybrid cab chassis platform, this vehicle delivers meaningful fuel savings without compromising operational capability. The integrated solar panel system powers onsite equipment, arrowboard, beacons, and ancillaries, independently of the engine, meaning operators can shut the truck down between deployments. Less idling. Less fuel consumption. Less emissions. And significantly less noise for the crew working alongside it all day.

The custom deck canopy provides rain and sun protection for operators in the field, a practical acknowledgement that TM work happens in all conditions, and the people doing it deserve better than exposure to the elements for an entire shift.

For fleet managers and operators under pressure to reduce emissions, cut running costs, and demonstrate a duty of care to their workforce — the Hybrid Series answers all three.

Available for 3850mm wheelbase applications in arrowboard or TM-VMS configuration.

Features

Level 1 capability

Custom deck canopy

Solar panel charging

Arrowboard/TMVMS

Emergency 'OFF' switch

Sandbag bins

Rigid safety gate

Certified fall arrest
