

Service Ute

Not every operational challenge happens on a traffic management site. For utilities and maintenance teams, the daily requirement is different, tools, equipment, and a functional workspace that moves with the job.

The TruGroup Service Ute was born from exactly that need. Approached by a long standing customer to rethink how their utilities maintenance teams were using vehicles in the field, TruGroup designed and built a mobile workspace purpose fitted to the demands of utilities operations. What started as a prototype evolved into a live project, refined through real operator feedback, built around how the job actually works.

The result is a functional, practical workspace on wheels. Organised tool storage, accessible equipment layout, and a build quality that reflects the same standards our TM customers have come to expect. Currently in build with a second generation design already in development, the TruGroup Service Ute is a product that will continue to evolve alongside the fleets it serves. As with any good product, constant revision and improvement is part of the process, and we're only getting started. Available soon. Speak to us about your fleet requirement.

Features

Aluminium body

Pull out drawer

Roof rack

Underbody storage

Underbody wash tank

Internal shelving & drawers

Accessory add-in points – hanger brackets & ancillaries

Central locking

Internal lighting

Front & rear flashers

Rear work lights

LED tail lights
