

Transporters

From light vehicle movement to heavy duty haulage, TruGroup's transporter builds are engineered around the specific demands of each job.

When a services client required a solution for the movement of mowers, small vehicles, and plant equipment, TruGroup delivered a purpose built transporter to match, full width ramps, a Superwinch S5500, and an under deck toolbox making it a practical, self sufficient solution for their everyday transport requirements.

For heavier, more demanding applications, our bespoke transporter deck, built onto a client supplied cab and chassis, demonstrates what's possible when the job calls for serious capability. Independent generator powered ramps, a recessed hi-power winch, and heavy duty construction deliver consistent performance under load.

Two different builds. One capability. Whatever you're moving, we can build around it.
