

Traffic Management Builds:

TruGroup is a traffic management business. We operate sites, we manage fleets, and we understand the daily demands placed on traffic management vehicles because we place those same demands on our own. When the equipment available in the market didn't meet our operational standards, we built better. That's how this range started, and that hands on operational reality still drives every design decision we make.

Whether you're an established traffic management operator refreshing your fleet, or new to traffic management and working out what you need, these trucks were designed from the inside out.

All our builds include:

Overhead beacon

Front & rear LED flashers

Rear deck work lights

Reverse/deck camera

Handbrake alarm wired to horn

Reverse alarm

Sandblast decks, anti-rust prime, and topcoat specification JW 180123A to match cab

Grip deck

We work across all major cab and chassis platforms and carry strong procurement relationships with leading truck brands.

Diversity Series

One vehicle. Three functions. Most TM vehicles are built for a single purpose, and they do that purpose well. But single purpose vehicles come with a cost. They sit idle when the job changes, they require depot runs between sites, and they demand more vehicles on the road to cover what one well designed platform could handle alone.

Designed for class 1 crew cab, 4175mm wheelbase configurations that moves equipment and people, it arrives on site ready for manual traffic control. When the job demands advance warning on a state highway or high speed environment, its AWVMS tail pilot capability meets that requirement, legally, compliantly, without swapping vehicles. Its Dual VMS functionality covers TMVMS and speed radar, replacing the need for a dedicated arrow board vehicle entirely.

When that job is done, it moves directly to the next site. No depot run. No vehicle swap. No second truck following behind. For fleet operators looking to reduce vehicle numbers without reducing capability, or for those building a TM fleet from the ground up and wanting to do more with less, the Diversity Series is the conversation worth having.

Features

Certified fall arrest

Level 1 capability

Galvanised signs rack

Dual VMS
